Ministry of Civil **Defence & Emergency** Management

Campaign Monitoring Research

June 2014

Ministry of Civil Defence & Emergency Management

ALL ALL ALL ALL

Background and objectives

Background

The Ministry of Civil Defence and Emergency Management needs to shift people's level of preparedness for disasters.

The Get Ready Get Thru social marketing campaign began in June 2006 and has now been running for eight years.

This survey builds upon a previous 2006 pre-campaign benchmark survey, and seven annual tracking surveys conducted from 2007 to 2013. All surveys are carried out in April and May each year, with the exception of the 2011 survey which was delayed by four weeks due to the February 2011 Christchurch earthquake.

Objective

To measure New Zealand residents' disaster preparedness, and to assess the effectiveness of the campaign over time.

How the survey was carried out

Methodology

- Random telephone interviewing of New Zealand residents aged 15 years and over. In total 1,264 interviews were carried out from 14 April to 14 May 2014.
- The methodology is very similar to that used in the benchmark and the previous annual measures, with the exception that additional interviews were carried out from 2011 onwards to allow more robust regional analyses.
- The maximum margin of error is +/- 3.0 percentage points at the 95% confidence level (for a stratified random sample).
- The overall results have been weighted to 2013 Census figures to adjust for the fact that some regions were 'oversampled', and to align the data with Census counts for age and gender.
- All differences cited in this report are statistically significant at the 95% confidence level.

Are fully prepared: 15%

Fifteen percent of all New Zealand residents are fully prepared for an emergency. Being fully

prepared means having an emergency survival plan that includes what to do when away from home, having emergency survival items and water, and regularly updating these items. This level of preparedness is in line with results from the past two years.

- As we've seen before, the level of preparedness differs by region those living in Wellington or the West Coast are more likely than average to be fully prepared, whilst those living in the Waikato are less likely.
- The main barriers to preparedness continue to be low motivation (31%), perceived likelihood of a disaster being low (18%), complacency (15%), and cost (14%).

Are prepared at home: 30%

Nearly a third of all New Zealand residents are <u>prepared at home</u> for an emergency, which is a similar result to the past three years following the Canterbury earthquakes.

Being prepared at home means having an emergency survival plan, having emergency survival items and water, and regularly updating these items.

Have emergency survival items: 86%

More than eight in ten New Zealand residents have necessary emergency items needed to survive a disaster, e.g., tinned food etc.

Younger people, especially those aged under 30 years, are **less** likely to have emergency survival items (75% compared to 90% for those aged 30 and over).

Have survival plan for at home: 59%

Nearly six in ten New Zealand residents have an emergency survival plan for their household while they are at home.

Younger people aged under 30 years (48%) and Auckland residents (50%) are **less** likely to have emergency survival plan for their household while at home.

Executive summary

GET READY () GET THRU

How well is the advertising working?

Taken action or thought about taking action as a result of seeing the ads: 76%

Although slightly down on last year, the advertising campaign continues to be effective, with most people who have seen the ads having done something or thought about doing something as a result (76% this year compared with 2013: 82%, 2012: 88%).

Actually taking action because of the ad has also fallen slightly since 2013, with around six in ten people (63% compared to 71% last year) who have seen the ads actually going beyond thinking to preparing. They've taken at least one of the following actions as a result:

- ✓ talked to family/friends (45%, down from 53% last year),
- ✓ made/updated a survival kit (40%, down from 44%),
- ✓ made a survival plan (28%, down from 34%),
- ✓ visited the Get Ready Get Thru website (13%, down from 17%),
- ✓ or visited other disaster preparation websites (8%, down from 9%).

Awareness of the advertising: 62%

Prompted awareness of the Get Ready Get Thru TV advertising has decreased to 62% from 68% in 2013.

Advertising diagnostics:

The advertising continues to be well received, with very low ad wear out (only 6% of those aware of the advertising strongly agree they are getting fed up with seeing them).

The vast majority of those who have seen the ads say they understood the message, the points made were believable and relevant, the information provided was helpful, and they enjoyed watching them.

Awareness of the Get Ready Get Thru

tag line: 59%

Prompted awareness of the tag line is in line with last year (2013: 57%).

Events and situations that may have influenced awareness of, and preparedness for, disasters in 2014

Putting the survey into context...

Before interpreting research results it is useful to consider the context, or events that occurred, prior or during fieldwork (14 April to 14 May 2014).

Factors that may have influenced the results include:

New Zealand

- Wellington Region and South Island storm (June 2013)
- West Coast earthquake (June 2013)
- Seddon earthquakes (July-August 2013)
- 6.2 Eketahuna earthquake (January 2014)
- Canterbury floods (March, April 2014)

Overseas

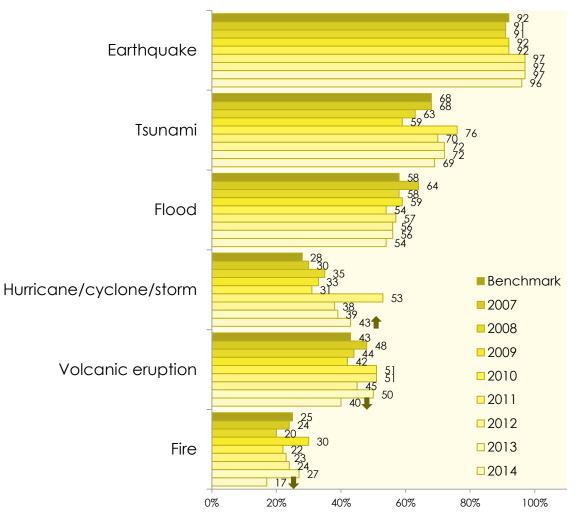

- North American Polar Vortex, America (Late 2013 Early 2014)
- Winter storms and flooding, United Kingdom (Late 2013 Early 2014)
- Cyclone Ian, Fiji and Tonga (January)
- Cyclone Christine, Western Australia (January)
- Cyclone Fletcher, Queensland Australia (February)
- 6.8 Yutian earthquake, China (February)
- American Tornado season, America (March, April)
- Oso Mudslide, Washington America (March)
- Cyclone Gillian, Northern Australia (March)
- Cyclone Ita, Queensland Australia (April)
- The Great Fire of Valparaíso, Chile (April)
- 8.2 and 7.7 Iquique earthquakes, Chile (April)
- 7.2 Guerrero earthquake, Mexico (April)
- Badakhshan mudslides, Afghanistan (May)
- 6.0 Mae Lao earthquake, Thailand (May)
- 5.6 Yunnan earthquake, China (May)
- California wildfires, America (May)
- Europe floods, Southeastern and Central Europe (May)
- San Diego County wildfires, America (May)
- 6.39 Aegean Sea earthquake, between Greece and Turkey (May)

More people are aware that a hurricane, cyclone or storm could occur in New Zealand

Residents of different regions more likely than average to mention:

- Auckland: Volcanic eruption (54%)
- Canterbury: Flood (66%)
- Gisborne: Tsunami (81%)
- Nelson/Marlborough: Fire (35%)
- Otago: Fire (29%)
- Southland: Flood (69%)
- Taranaki: Volcanic eruption (65%)
- Wellington: Fire (24%)
- West Coast: Hurricane/cyclone/storm (77%)

Q1 First I'd like to ask about the types of major disasters that could happen in New Zealand. What types of disasters can you think of that could happen in New Zealand in your lifetime? Base: All Respondents: Benchmark (n= 1001), 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264). Note: Only the top six disasters for 2014 are shown.

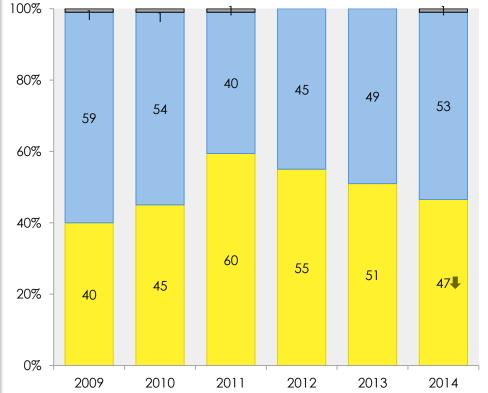

There has been a gradual year on year decline since 2011 in the number of people who've taken steps to prepare for a disaster in the last 12 months.

Taken steps to prepare for a disaster in the last 12 months

n GET READY

Just under half (47%) of those living in New Zealand have taken steps to prepare for a disaster in the last 12 months. This is equivalent to the 2010 result before the Canterbury earthquakes struck.

Those more likely to have taken steps to prepare for a disaster in the last 12 months are:

- Employed full time (53%)
- Personally or jointly earning more than \$60k
 (55% and 52% respectively)

Those less likely to have taken steps to prepare for a disaster in the last 12 months are:

Younger people aged 15 – 19 years (29%)

Aged 70+ years and/or retired (37% and 38% respectively)

∎Don't know

Not taken steps to prepare in last twelve months

Taken steps to prepare in last twelve months

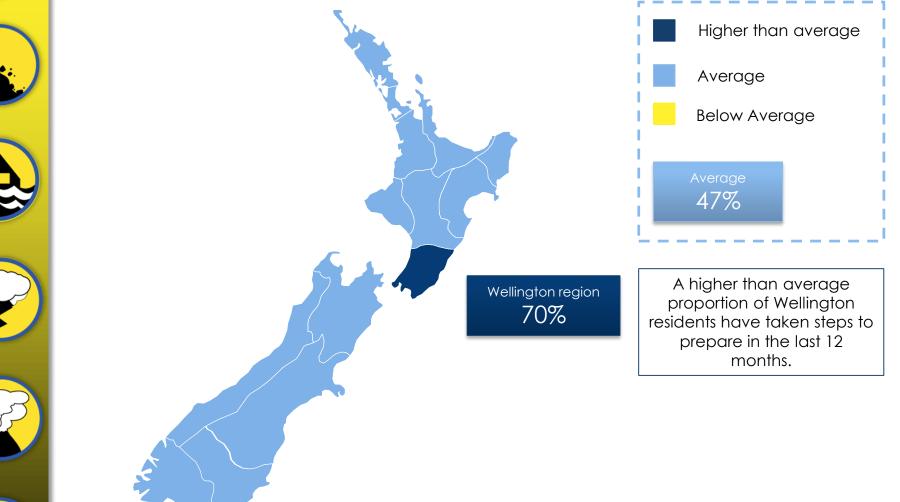

Q11a: In the last 12 months, have you taken any steps to prepare yourself or your household for a disaster? Base: All Respondents, 2009 (n = 1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

2014

The national result (86%) has been increasing since 2012.

Those more likely to have emergency survival items are:

- Aged 50+ years old and/or retired (93%)
- Earning more than \$100k as a household (91%)

Those less likely to have emergency survival items are:

Young people aged 15 - 29 years
 (75%)

Q10. You have necessary emergency items needed to survive a disaster, e.g. tinned food etc Base: All Respondents: Benchmark (n= 1001), 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

2009

Emergency survival items: Regional differences

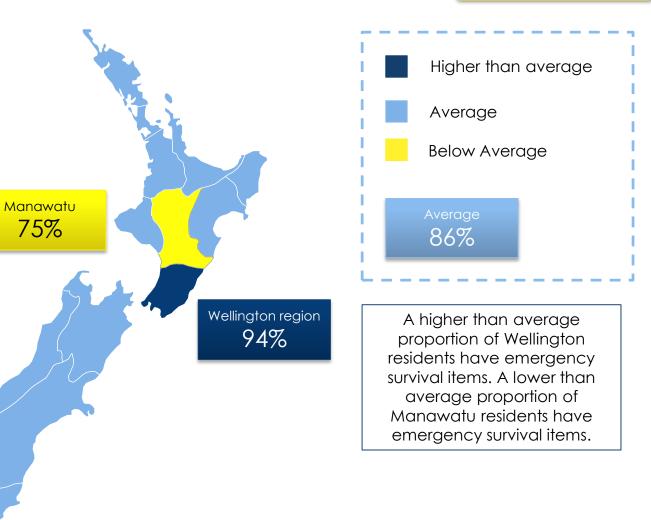

Note: Percentages are presented that are statistically higher or lower than the national average at the 95% confidence level.

Over one quarter of New Zealand residents (26%) have a plan that includes what to do when away from home

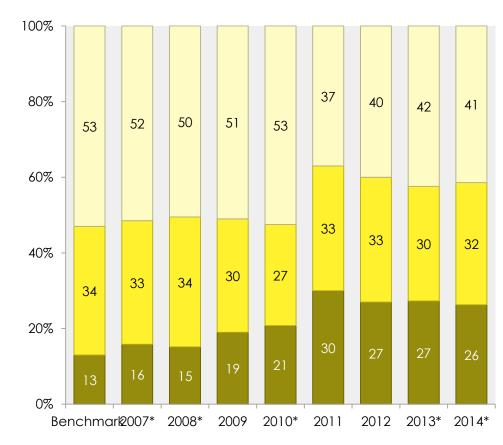

Those more likely to have a plan that includes what to do when away from home are:

Employed full time (35%)

Those less likely to have a plan that includes what to do when away from home are:

- Younger people aged between 15 and 29 years (17%)
- Older people aged 70+ and retirees (15% and 16% respectively)

- No survival plan
- Have plan (but not when away from home)
- Have a plan (includes when away)

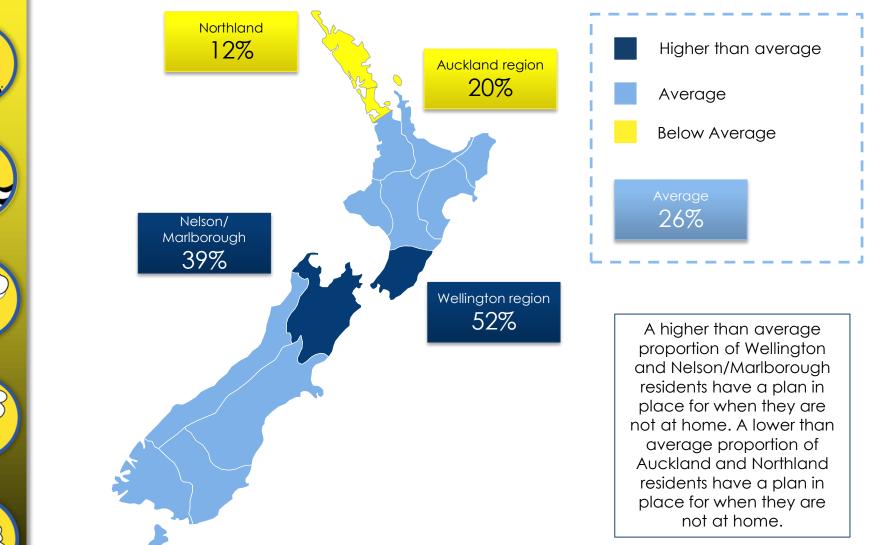

*Percentages do not add to 100% due to rounding

Q11 Does your survival plan include what to do when you are not at home? Base: All Respondents: Benchmark (n= 1001), 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

Note: Percentages are presented that are statistically higher or lower than the national average at the 95% confidence level.

Preparedness continuum

Why aren't people prepared?

There has been a decrease in the proportion of people saying they don't expect a disaster to happen or are generally unconcerned, but overall the main reasons are in line with last year.

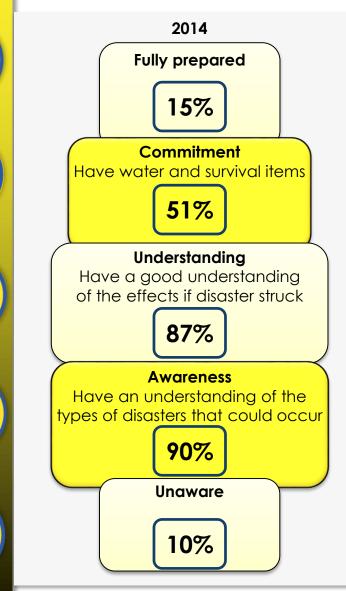

Barriers to being prepared	BM	'07	' 08	' 09	'10	'11	'12	'13	'14
Haven't got around to it/no motivation/no time	40%	44%	34%	25%	23%	32%	31%	30%	31%
Don't expect it to happen/unlikely to happen	36%	29%	22%	21%	17%	17%	25%	27%	18%
Complacency	5%	3%	21%	23%	23%	14%	16%	20%	15%
The cost/don't have enough money	8%	5%	6%	10%	11%	16%	18%	16%	14%
Not enough information on being prepared	15%	6%	4%	8%	9%	9%	10%	13%	11%
Partly prepared/have some emergency supplies	6%	15%	7%	10%	3%	16%	12%	8%	10%
Haven't thought about it/don't think about disasters	13%	10%	11%	11%	8%	5%	7%	7%	10%
Haven't got supplies/shortage of emergency survival items	2%	*	1%	4%	6%	4%	6%	8%	9%
Don't know what disaster will occur/what to prepare for	6%	9%	2%	4%	3%	4%	9%	7%	7%

Q6. You said that being prepared for a disaster is important, but you are not well prepared for one. What stops you from being prepared? Base: Those who stated that being very well/ quite well prepared for a disaster was important but said that they were not well prepared for one: Benchmark (n=341), 2007 (n=387), 2008 (n=398), 2009 (n=431), 2010 (n=417), 2011 (n=383), 2012 (n=427), 2013 (n=432), 2014 (n=397). Note: The top nine reasons are shown. *Less than 0.5%

Most at risk when disaster strikes...

Non-NZ European and non-Maori:

 Less likely to be committed (42%), and to have an understanding (80%) or awareness (80%). More likely to be unaware.

Those born outside of New Zealand:

• Less likely to be aware (85%).

Young people, aged 15 to 29 years:

• Less likely to be fully prepared (6%), committed (33%), and to have an understanding (79%) or awareness (80%).

How effective is the advertising?

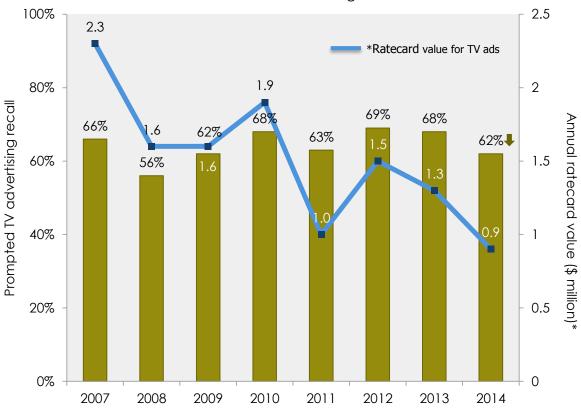

Prompted recognition: Almost two thirds of New Zealand residents specifically recall the Get Ready Get Thru television advertising.

Recall is **lower** amongst:

- Those aged 60 plus and Retirees (47% and 46% respectively)
- Those born outside of New Zealand (50%)
- Those who's first language isn't English (47%)

Percentage of New Zealanders who have seen the Civil Defence advertising on TV and the ratecard value of the TV advertising.

Q18. Have you seen any television advertisements for Civil Defence presented by Peter Elliot? The ads featured emergency services, public transport, and hospitals. The ads show what services may not be there to help you in an emergency and what you need to do to help you survive a disaster. Peter also directs us to the Yellow Pages for further information as well as telling us to go to the "Get Ready, Get Thru" website. Base: All Respondents: 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

Action taken as a result of seeing the ads

Thought about preparing for disasters

Talked to family / friends

Made / updated a survival kit

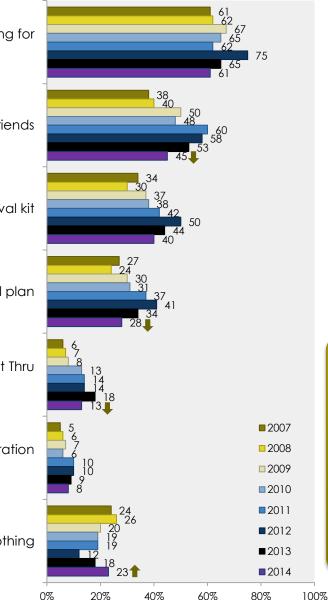

Made a survival plan

Visited Get Ready, Get Thru website

Visited other disaster preparation websites

Nothing

Significantly different from the 2013 result

More than seven in ten people (76%) have thought about preparing or have taken action as a result of seeing the ads.

However, this is lower than last year (which was 82% in 2013).

Almost two thirds of New Zealand residents who have seen the ads (63%) versus 71% last year) have gone beyond thinking about preparing, and have taken at least one of the following actions as a result: talked to family/friends, made a survival kit, made a survival plan, visited the Get Ready Get Thru website, or visited other disaster preparation websites.

Q20 What if anything have you done as a result of seeing the ads? Have you... Base: Those respondents who stated that they had seen the Civil Defence TV advertising, 2007 (n=631), 2008 (n=518), 2009 (n=608), 2010 (n=654), 2011 (n=710), 2012 (n=830), 2013 (n=845), 2014 (n=771).

Familiarity with the tagline continues to be high

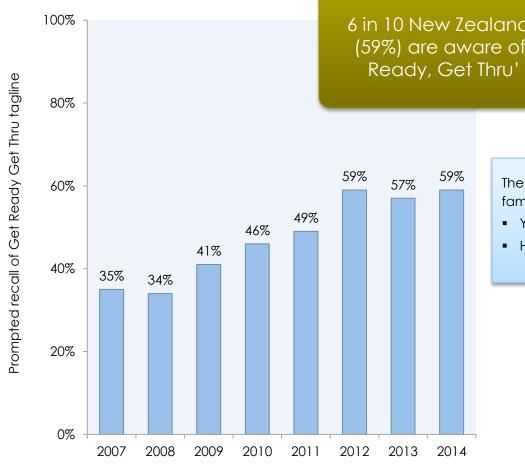

6 in 10 New Zealand residents (59%) are aware of the 'Get Ready, Get Thru' tagline.

> The tagline continues to be particularly familiar to:

- Young people aged 15 to 39 (73%).
- Households with 5 or more people (73%).

Q21. Before I mentioned it earlier, had you previously heard of the tagline "Get Ready, Get Thru"? Base: All Respondents: 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

years

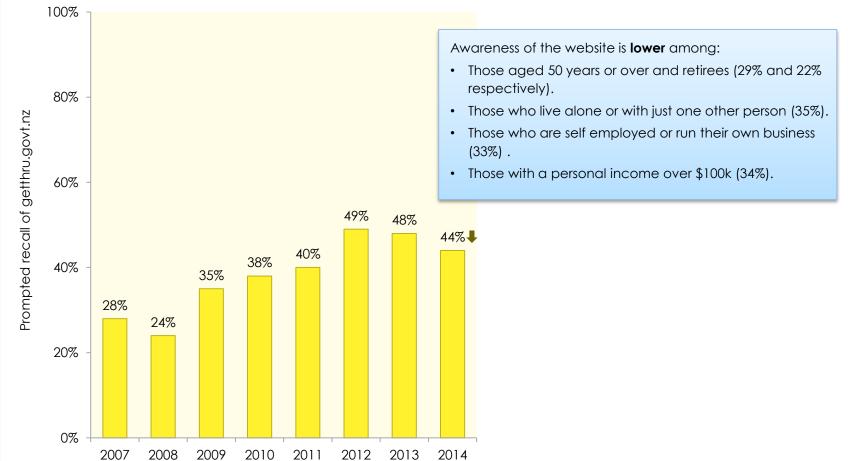

There continues to be reasonably high awareness of the getthru.govt.nz website although it has declined over the last two

Q22 And had you also previously heard of the website 'getthru.govt.nz'? Base: All Respondents: 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

Advertising message take-out

Q17. What do you think the ads were trying to tell you? Base: Those respondents who stated that they have seen or heard advertising about preparing for a disaster, 2009 (n=549), 2010 (n=659), 2011 (n=713), 2012 (n=797), 2013 (n=718), 2014 (n=694). Note: The top thirteen messages are shown.

GET READY GET THRU

The main message take out continues to be 'be prepared', followed by 'make sure you have supplies'.

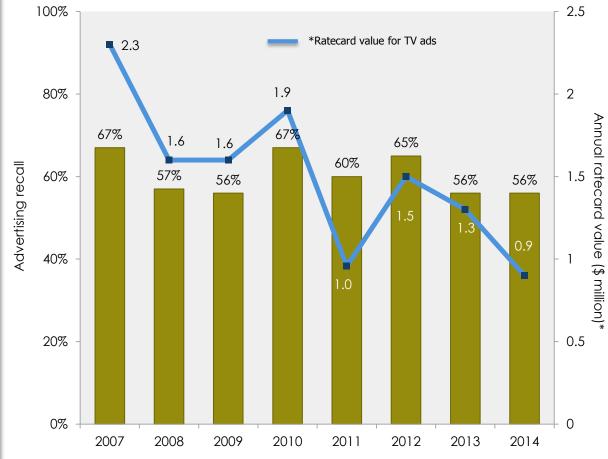

Significantly different from the 2013 result

Colmar Brunton 2014 34

Unprompted awareness of any disaster preparedness advertising has not changed in the last 12 months.

Percentage of New Zealanders who have seen, heard, or read **any** advertising about preparing for a disaster and the ratecard value of the TV advertising.

Note that this question measures awareness of non-MCDEM advertising (e.g., regional council campaigns) **as well as** MCDEM advertising.

Significantly different from the 2013 result

Most people recall preparedness advertising on TV, however there has been a visible decline since 2012

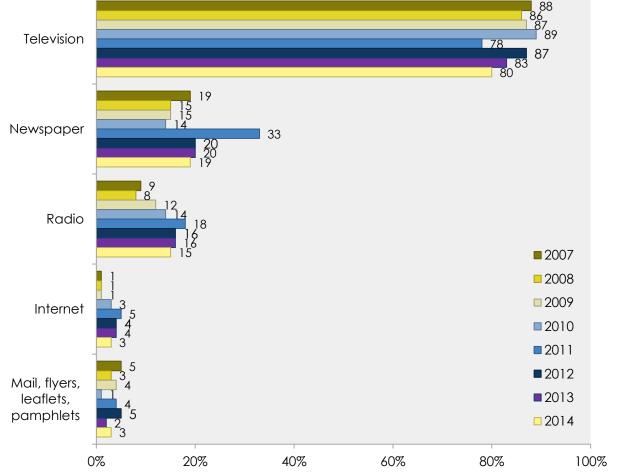

Sources of awareness of preparedness advertising

Q16 Where did you see, hear or read the ads? Base: Those respondents who stated that they have seen, heard or read advertising about preparing for a disaster, 2007 (n=651), 2008 (n=543), 2009 (n=549), 2010 (n=659), 2011 (n=713), 2012 (n=797), 2013 (n=718), 2014 (n=694). Note: Responses 2% and below not shown.

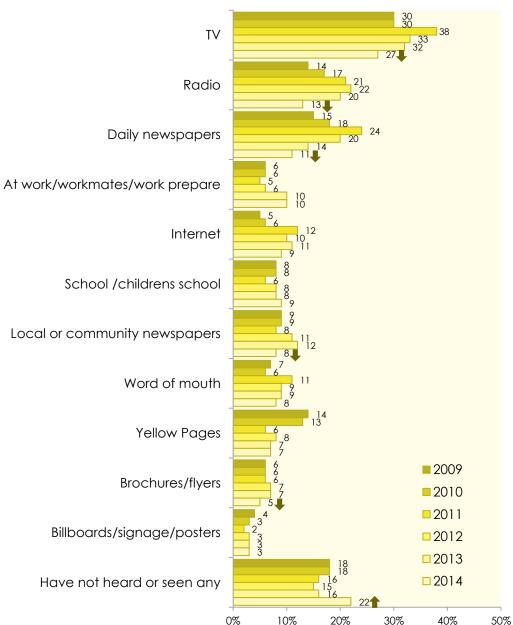

Sources of <u>non-advertising</u> preparedness messages

GET READY GET THRU

Awareness of <u>non-</u> <u>advertising</u> disaster preparedness messages is slightly lower than last year.

Q22a Other than in any advertising, where else have you seen or heard other messages or information about disasters? Base: All Respondents, 2009 (n = 1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264). Note: The top ten sources are shown.

Significantly different from the 2013 result

Awareness

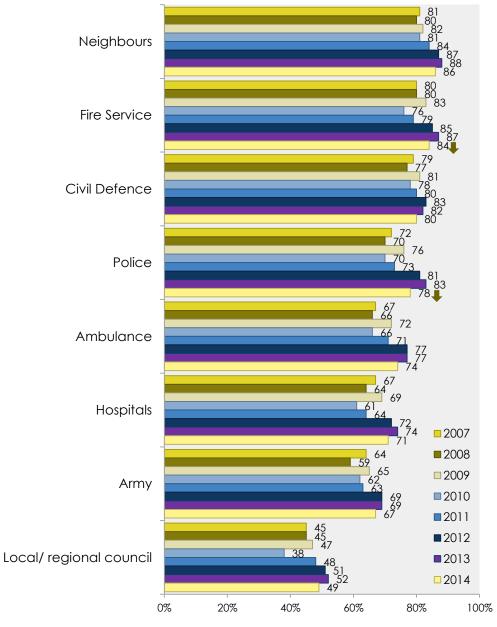

Who would be able to help following a disaster?

GET READY GET THRU

Awareness remains high that a wide range of services can help following a disaster.

Q7. Now I'd like you to imagine that there has been a disaster in the town, city or rural area where you live. What groups or individuals do you think would be able to help you following a disaster? Base: All Respondents: 2007 (n= 1000), 2008 (n=1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

Significantly different from the 2013 result

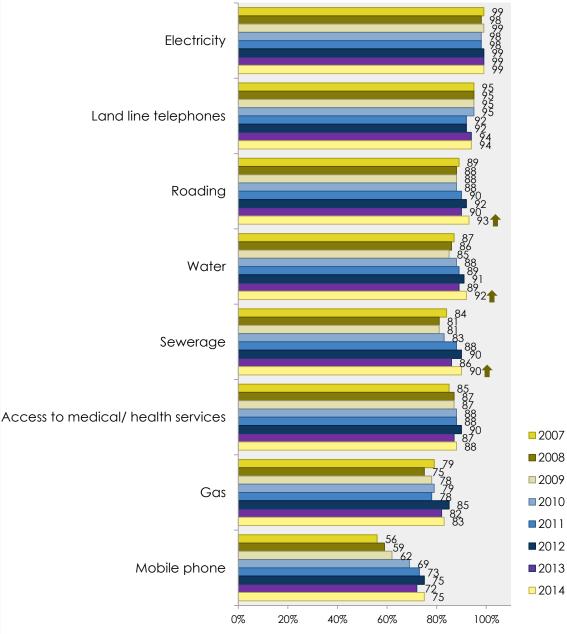

Which services could be disrupted?

GET READY GET THRU

The majority of New Zealand residents are aware that a number of services may be disrupted following a disaster.

Significantly different from the 2013 result

Q8 Still imagining there had been a disaster, some of the normal services may not be available. Which of the following household utilities or infrastructure services do you think could be disrupted? Base: All Respondents: 2007 (n= 1000), 2008 (n=1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

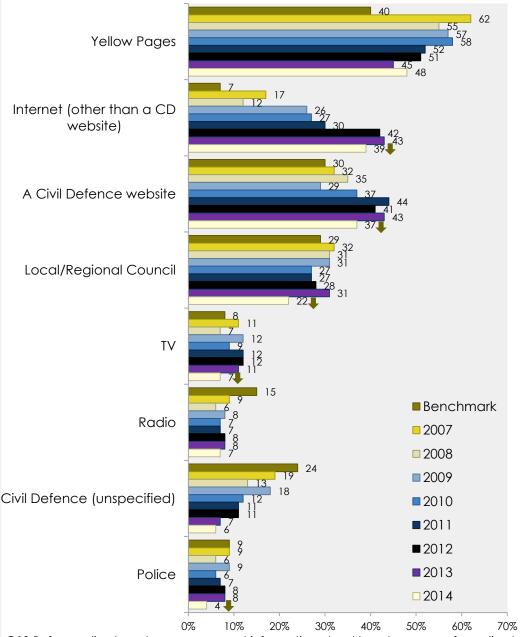

Finding information before a disaster on how to prepare

GET READY GET THRU

The most common places people look to for preparedness information continues to be the Yellow Pages or online.

Q12 Before a disaster, where can you get information about how to prepare for a disaster? Base: All Respondents: Benchmark (n= 1001), 2007 (n= 1000), 2008 (n= 1016), 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264). Note: The top eight results for 2013 are shown. Significantly different from the 2013 result

Almost 9 in 10 have a Yellow Pages directory in their home.

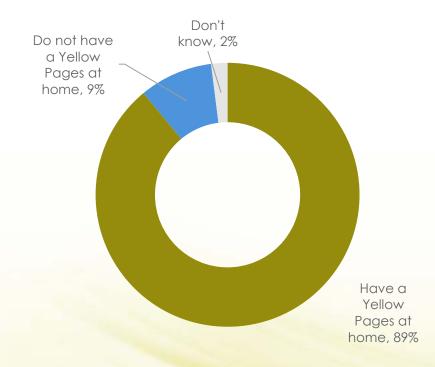

Do you currently have a Yellow Pages directory in your home?

Those **more likely** to have a Yellow Pages directory in their home include:

- Those over the age of 50 years and retirees (94% and 95% respectively)
- Canterbury residents (96%)

Those **less likely** to have a Yellow Pages directory in their home include:

- Younger people aged 15 to 39 (83%)
- Those with a personal or household income over \$100k (77% and 83% respectively)
- Auckland residents (79%)

Q22f. Do you currently have a Yellow Pages directory in your home? Base: All Respondents (n=1,264)

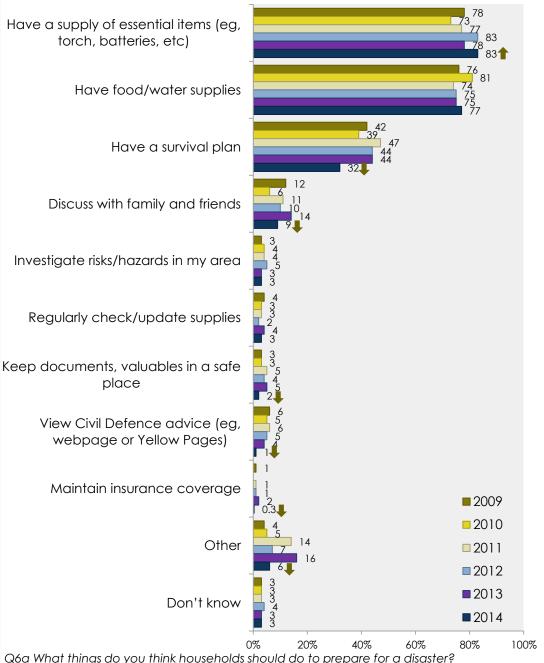

How to prepare for a disaster (unprompted)

GET READY GET THRU

Similar to previous years, most New Zealand residents mention that to prepare for a disaster they need a supply of survival items, and food and water. Only one third mention that they need a survival plan.

Significantly different from the 2013 result

Base: All Respondents: Benchmark 2009 (n=1000), 2010 (n=1000), 2011 (n=1164), 2012 (n=1255), 2013 (n=1263), 2014 (n=1264).

Attitudes

Attitudes toward disasters

		Q	% agree
In a disaster there will be someone there to help you	Benchmark 2007 2008 2009 2010 2011 2012 2013 2014	2 3 24 34 27 13 19 40 27 29 18 40 31 28 15 42 34 216 18 36 28 210 14 35 39 12 14 40 33 27 14 39 38 29 16 38 35	61 67 76 71 64 74 73 77 74

Conclusions

Conclusions

- As we saw in 2012 and 2013 the Christchurch earthquakes gave New Zealand residents a sense of urgency to take action to get better prepared. It also enabled a better understanding of what can happen in an emergency. As a result, New Zealand's preparedness increased substantially in 2011.
- Whilst preparedness this year is still higher than it was pre-2011, an element of lethargy is creeping into the public's preparedness levels. Some groups continue to be less well prepared than others.
 - In particular it is necessary to increase awareness, knowledge, and relevance for younger people and immigrant groups.

Fifteen percent of all New Zealand residents are <u>fully</u> <u>prepared</u> for an emergency.

Eighty six percent have emergency survival items. The majority are aware of the types of disasters that could occur (90%) and have an understanding of the effects if one struck (87%).

Conclusions (continued)

- The ads are still effectively prompting action (although not to the same extent as the period following the Canterbury earthquakes). Most people who have seen the ads (76%) have done something or thought about doing something as a result (down from 82% last year).
- The tag line 'Get Ready, Get Thru' is still high in peoples' consciousness – nearly six in ten New Zealand residents are aware of it when prompted (59%).

Key challenges

- Although the impact of the Christchurch earthquakes on New Zealand residents may have reduced slightly since immediately post-quake in 2011, the levels of preparedness are still consistently higher than before the earthquakes. However, it's still necessary to remind and encourage people to maintain and increase their preparedness.
 - The mass marketing campaign has proved effective at building and maintaining preparedness among people living in New Zealand.
 - ✓ Further effective engagement with targeted communities and local organisations (e.g., schools, churches, student unions) will help to increase awareness among those groups most at risk (young people, ethnic minorities, and people new to the country).

Regional Analysis

Regional Analyses

The pages that follow list the statistically significant <u>differences</u> between the overall (average) results for NZ and responses provided by people living in the various regions of the country.

The graph below provides the sample size for each region. The results have been weighted to 2013 Census figures to represent the proportion of New Zealand residents aged 15+ within each region.

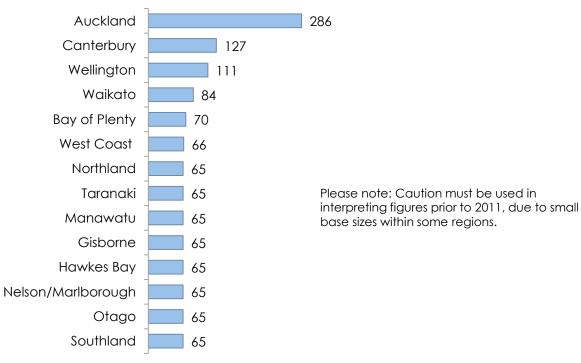

Number of interviews carried out in each region

Source: Survey call data (total number of interviews = 1,264)

	Bench- mark	2007	2008	2009	2010	2011	2012	2013	2014
Fully prepared	4	4	3	7	9	11	10	11	11
Prepared at home	15	15	14	20	18	21	22	23	21
Has a plan	38	39	35	40	40	53	46	46	50
Has survival items	83	83	67	74	75	79	75	79	84

Preparedness

- Auckland residents are less likely than average to be prepared at home (21% c.f. 30% national average) and on the Preparedness Continuum they are less likely to be 'committed' by having prepared water and survival items for a disaster (40% c.f. 51% national average).
- In Auckland, preparedness levels are significantly lower than average in four of the preparedness diagnostics, which are:
 - You are familiar with the Civil Defence information in the Yellow Pages (51% c.f. 63% national average).
 - You have an emergency survival plan for your household (50% c.f. 59% national average).
 - You have stored at least 3 litres of water per person for 3 days for each member of your household (41% c.f. 53% national average).
 - You regularly update your emergency survival items (43% c.f. 51% national average).
- Aucklanders are also less likely than average to have an emergency plan that includes what to do while they are at home and while away from home (only 20% c.f. 26% national average).

Advertising and information

- There are no significant differences between Auckland residents and the general population in terms of awareness and where they've seen advertising (56% recall seeing, hearing, or reading any advertising about preparing for a disaster c.f. 56% national average).
- Similar to the national average, 60% of Auckland residents recall having seen a Civil Defence TV advertisement (compared with 62% national average). 57% have previously heard of 'Get Ready, Get Thru', and 44% have heard of getthru.govt.nz (both in line with national averages).

Disaster awareness

- Auckland residents are more likely than average to think that a volcanic eruption could happen in NZ in their lifetime (54% c.f. 40% national average), and they are less likely than average to think a flood (42% c.f. 54% national average) or fire could happen (11% c.f. 17% national average).
- Residents in the Auckland region are more likely than average to agree that there will always be adequate warning before a disaster hits (45% c.f. 36% national average).
- Auckland residents are less likely than average to:
 - Think that their neighbours will be able to help them following a disaster (80% c.f. 86% national average).
 - Think that before a disaster they can get information about how to prepare for a disaster from their local/regional council (only 15% c.f. 24% national average).
 - Have a Yellow Pages directory in their home (79% c.f. 89% national average).

Sample size = 286

AUCKLAND (CONTINUED)

Disaster awareness continued

- Residents from the Auckland region are:
 - Less likely than average to think that access to medical and health services could be disrupted following a disaster (83% c.f. 88% national average).
 - More likely than average to think that gas services will be disrupted following a disaster (91% c.f. 83% national average).

 Residents from the Auckland region are less likely than average to think that people should move to higher ground/away from the beach following a tsunami warning (79% c.f. 85% national average), and more likely than average to say they would not know what to do following a tsunami warning (5% c.f. 3% national average).

CANTERBURY

	Bench- mark	2007	2008	2009	2010	2011	2012	2013	2014
Fully prepared	5	10	8	11	13	NA	32	26	22
Prepared at home	19	24	40	25	27	NA	50	40	45
Has a plan	52	52	62	54	51	NA	79	69	66
Has survival items	79	87	89	83	80	NA	88	91	86

*Note: Up until 2010 the results for the Canterbury region were combined with the results for the West Coast region.

Preparedness

- The proportion of Canterbury residents who are prepared at home is significantly higher than average (45% c.f. 30% national average).
- On the Preparedness Continuum Canterbury residents are more likely to be 'committed' having prepared water and survival items for a disaster (64% c.f. 51% national average).
- In Canterbury, preparedness levels are significantly higher than average for the following four preparedness diagnostics:
 - You are familiar with the Civil Defence information in the Yellow Pages (72% c.f. 63% national average).
 - You have stored at least 3 litres of water per person for 3 days for each member in your household (67% c.f. 53% national average).
 - You regularly update your emergency survival items (62% c.f. 51% national average).
- Cantabrians are less likely than average to say they feel 'not that well prepared' for a disaster (19% c.f. 29% national average).
- Unsurprisingly, Canterbury residents are more likely to have been prompted to prepare for a disaster by the Christchurch earthquakes (81% c.f. 41% national average) and they are less likely to have done so because of overseas disasters (1% c.f. 10% national average).

CANTERBURY (CONTINUED)

Changes in preparedness since 2013

- Since 2013 there has been a decrease in the proportion of people who say their emergency plan includes what to do when not at home (down to 33% in 2014 from 39% in 2013).
- There has also been a decrease in the proportion of people who say they have the necessary emergency items to survive a disaster (down to 86% in 2014 from 91% in 2013).

Advertising and information

- There are no other significant differences between Canterbury residents and the general population in terms of awareness and where they've seen advertising (57% recall seeing, hearing, or reading any advertising about preparing for a disaster c.f. 56% national average).
- Similar to the national average, 68% of Canterbury residents recall having seen a Civil Defence TV
 advertisement (compared with 62% national average). 62% have previously heard of 'Get Ready, Get Thru',
 and 43% have heard of getthru.govt.nz (both in line with national averages).

Disaster awareness

- Canterbury residents are less likely than average to think that a volcanic eruption (28% c.f. 40% national average) could happen in NZ in their lifetime, and they are more likely than average to think a flood (66% c.f. 54% national average) or landslip/slide could happen (8% c.f. 4% national average).
- They are also less likely than average to agree that there will always be adequate warning before a disaster hits (23% c.f. 36% national average).
- Canterbury residents are more likely to have a Yellow Pages directory in their home (96% c.f. 89% national average).
- Residents from the Canterbury region are less likely than average to think that the following household utilities
 or infrastructure services could be disrupted following a disaster:
 - Gas (72% c.f. 83% national average).
 - Landline telephones (85% c.f. 94% national average).
 - In the event of a tsunami, a lower proportion of Canterbury residents said that people should check their emergency get-away kit (2% c.f. 12% national average).

WELLINGTON

	Bench- mark	2007	2008	2009	2010	2011	2012	2013	2014	
Fully prepared	18	16	24	14	18	33	25	32	33	
Prepared at home	35	37	41	26	34	51	40	47	51	
Has a plan	59	67	63	49	57	79	71	76	85	
Has survival items	76	77	82	71	86	88	83	86	94	

Preparedness

- On the Preparedness Continuum Wellington residents are significantly more likely than average to be:
 - Fully prepared (33% c.f. 15% national average).
 - Prepared at home (51% c.f. 30% national average).
 - Committed having prepared water and survival items for a disaster (81% c.f. 51% national average).
- Wellington residents are more likely than average to say that they feel 'quite well prepared' for a disaster (66% c.f. 50% national average) and less likely to say they are 'not that well prepared' or 'not prepared at all' for a disaster (18% c.f. 38% national average).
- The proportion of Wellington residents who have taken steps in the past 12 months to prepare for a disaster is higher than average (70% c.f. 47% national average).
- Similarly, the proportion of Wellington residents who have a survival plan for when they are at home <u>and</u> away from home is significantly higher than average (52% c.f. 26% national average).

WELLINGTON (CONTINUED)

Preparedness continued

- In Wellington, preparedness levels are significantly higher than average in four of the preparedness diagnostics, including:
 - You have a good understanding of what the effects would be if a disaster struck in your area (96% c.f. 87% national average).
 - You have an emergency survival plan for your household (85% c.f. 59% national average).
 - You have stored at least 3 litres of water per person for 3 days for each member of your household (83% c.f. 53% national average).
 - You have the necessary emergency items needed to survive a disaster (94% c.f. 86% national average).

Advertising and information

- Wellington residents are less likely than average to say they have seen advertising about preparing for a
 disaster on the television (68% c.f. 80% national average).
- There are no other significant differences between Wellington residents and the general population in terms of awareness and where they've seen advertising (61% recall seeing, hearing, or reading any advertising about preparing for a disaster c.f. 56% national average).
- Similar to the national average, 63% of Wellington residents recall having seen a Civil Defence TV advertisement (compared with 62% national average). 65% have previously heard of 'Get Ready, Get Thru', and 49% have heard of getthru.govt.nz (both in line with national averages).

WELLINGTON (CONTINUED)

Disaster awareness

- Wellington residents are more likely than average to think a fire (24% c.f. 17% national average) could happen in New Zealand in their lifetime.
- They are also more likely than average to think that before a disaster they can get information about how to prepare for a disaster from:
 - Ministry of Civil Defence website (55% c.f. 40% national average).
 - Their local/regional council (45% c.f. 24% national average).
 - Government/government departments (6% c.f. 3% national average).
- Residents from the Wellington region are more likely than average to think that the following household utilities or infrastructure services could be disrupted following a disaster:
 - Gas (92% c.f. 83% national average).
 - Water (99% c.f. 92% national average).
 - Sewerage (97% c.f. 90% national average).
- Wellington residents are more likely than average to say that in the event of a strong earthquake, people should:
 - Stay indoors (17% c.f. 10% national average).
 - Implement their survival plan (7% c.f. 2% national average).
- In the event of a tsunami, a higher proportion of Wellington residents said that people should:
 - Move to higher ground (93% c.f. 85% national average).
 - Check on family/friends/neighbors (38% c.f. 23% national average).

WAIKATC

	Bench- mark	2007	2008	2009	2010	2011	2012	2013	2014
Fully prepared	9	6	7	11	12	12	8	12	6
Prepared at home	21	22	19	18	21	34	29	29	18
Has a plan	44	46	45	50	47	57	52	55	50
Has survival items	68	91	81	75	80	86	77	86	89

Preparedness

- Waikato residents are statistically less likely than average to be:
 - Fully prepared (6% c.f. 15% national average).
 - Aware have an understanding of the types of disasters that could occur (82% c.f. 90% national average).
 - Prepared at home (18% c.f. 30% national average).

- In the Waikato, preparedness levels are significantly lower than average in two of the preparedness diagnostics, which are:
 - You have a good understanding of what the effects would be if a disaster struck in your area (82% c.f. 90% national average).
 - You have stored at least 3 litres of water per person for 3 days for each member of your household (41% c.f. 53% national averages).

Sample size = 84

Advertising and information

- The proportion of Waikato residents that have read advertising about preparing for a disaster in a newspaper is lower than the national average (6% c.f. 19% national average).
- There are no other significant differences between Waikato residents and the general population in terms of awareness and where they've seen advertising (54% recall seeing, hearing, or reading any advertising about preparing for a disaster c.f. 56% national average).

 Similar to the national average, 59% of Waikato residents recall having seen a Civil Defence TV advertisement (compared with 62% national average). 61% have previously heard of 'Get Ready, Get Thru', and 38% have heard of getthru.govt.nz (both in line with national average).

Disaster awareness

- Waikato residents are more likely than average to think that an infrastructure failure could occur in NZ during their lifetime (7% c.f. 2% national average) and are less likely than average to think that a volcanic eruption could occur (29% c.f. 40% national average).
- Those living in the Waikato region are more likely than average to not know what to do during and immediately after an earthquake (8% c.f. 3% national average).

BAY OF PLENTY

	Bench- mark	2007	2008	2009	2010	2011	2012	2013	2014	
Fully prepared	8	2	13	15	12	12	17	17	11	
Prepared at home	16	16	34	28	22	34	37	32	30
